

How to use Daemon to Update BOOT & FW

V1.1

History

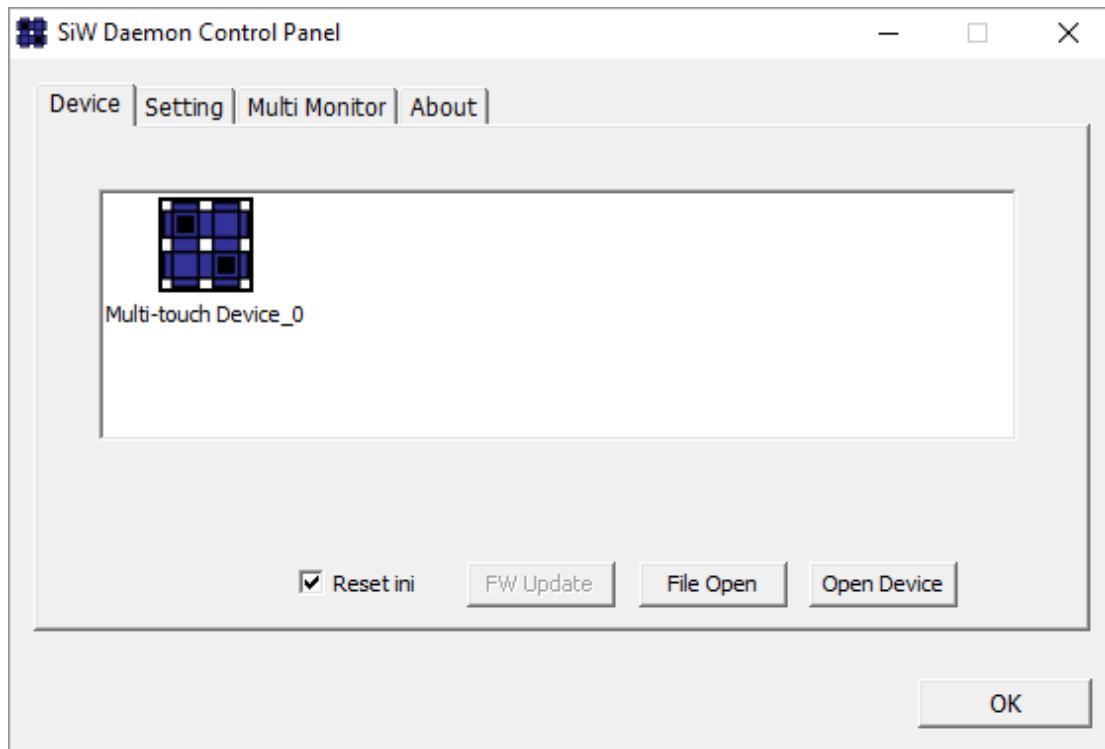

V1.0	First release	2016/09/01
V1.1	Add the method to update BOOT	2018/3/16

Note:

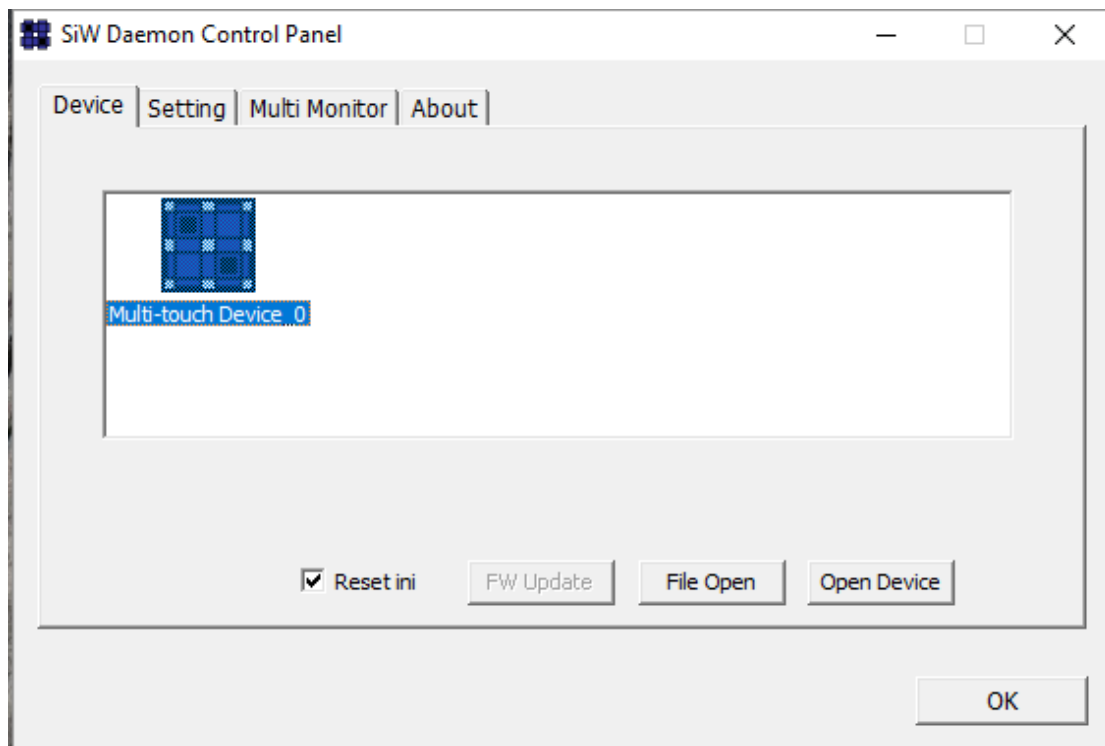

1. If you only want to upgrade the FW, please perform steps 1, 6 ~ 9.
2. If you want to upgrade BOOT and FW, please perform steps 1 ~ 9.
3. Please refer to the following table to know each version of BOOT and base FW compatibility.

BOOT Version	Base FW Version	Compatibility
SWBL_01_V1.4.4	V2.6.0.0.0 Below	Compatible
	V2.6.0.0.0 or Above	Incompatible
SWBL_01_V1.4.6	V2.6.0.0.0 Below	Incompatible
	V2.6.0.0.0 or Above	Compatible

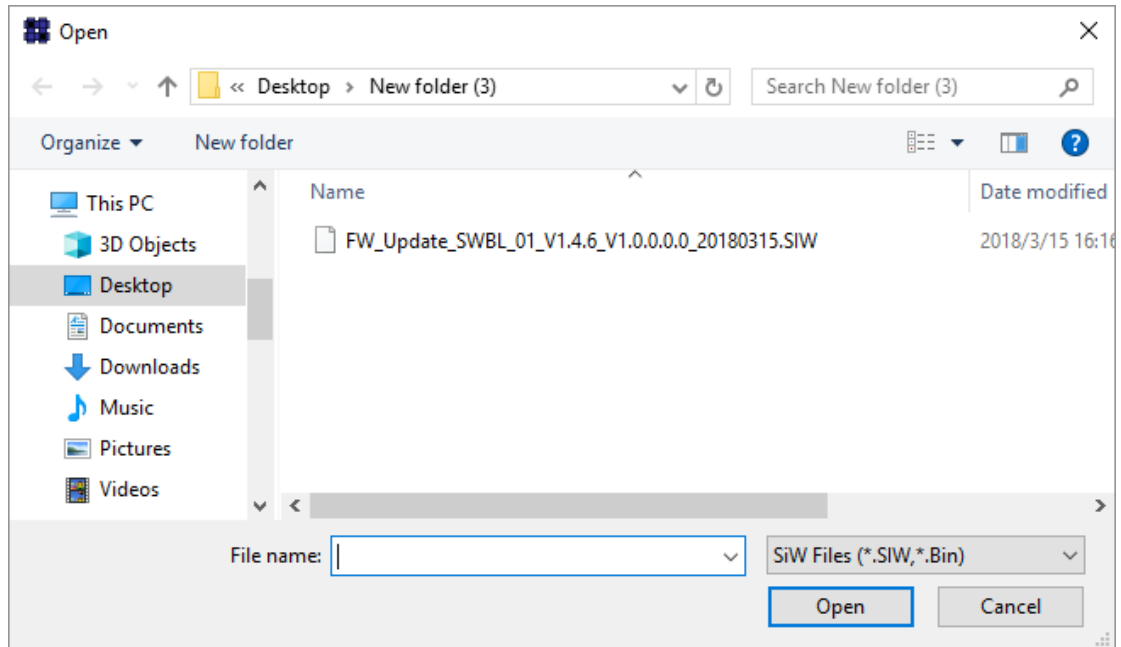

1. Open Daemon, under the interface of the SiW Daemon Control Panel, press “F6” of the keyboard to show the function of the upgrade.

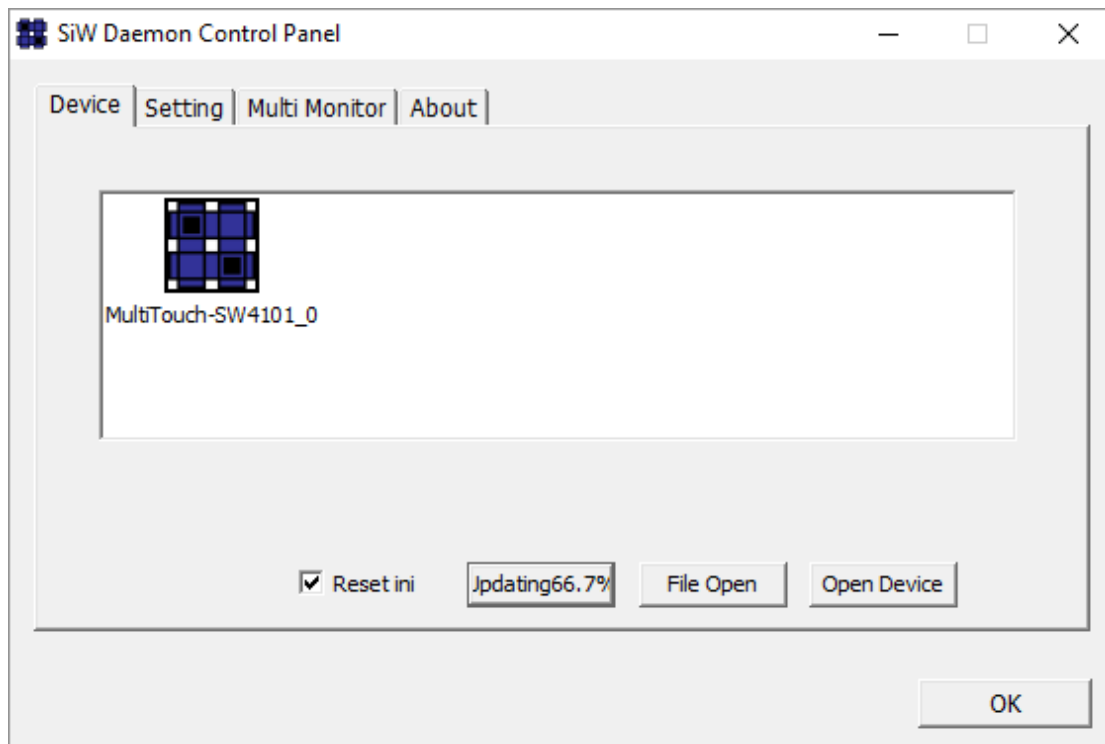

2. Click the device icon to select the device you want to upgrade, click the “File Open” button to select the SIW file.

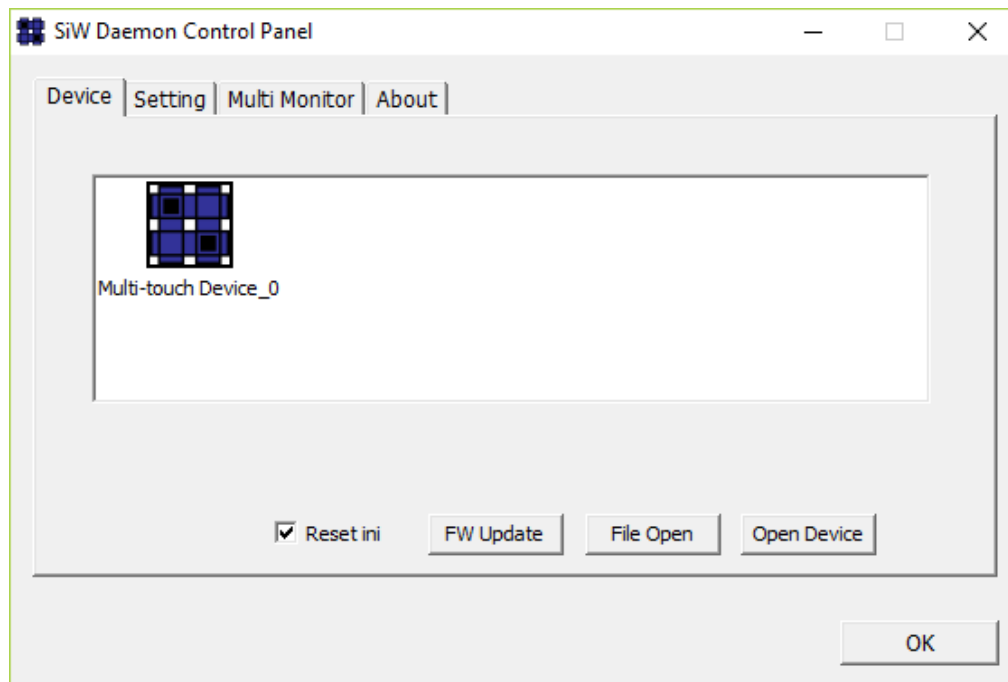

3. Select the SIW file to upgrade BOOT. SIW file name is “FW_Update_SWBL_01_V1.4.6_V1.0.0.0.0_20180315.SIW”, it means that updating this SIW file, BOOT will be upgraded to SWBL_01_V1.4.6.

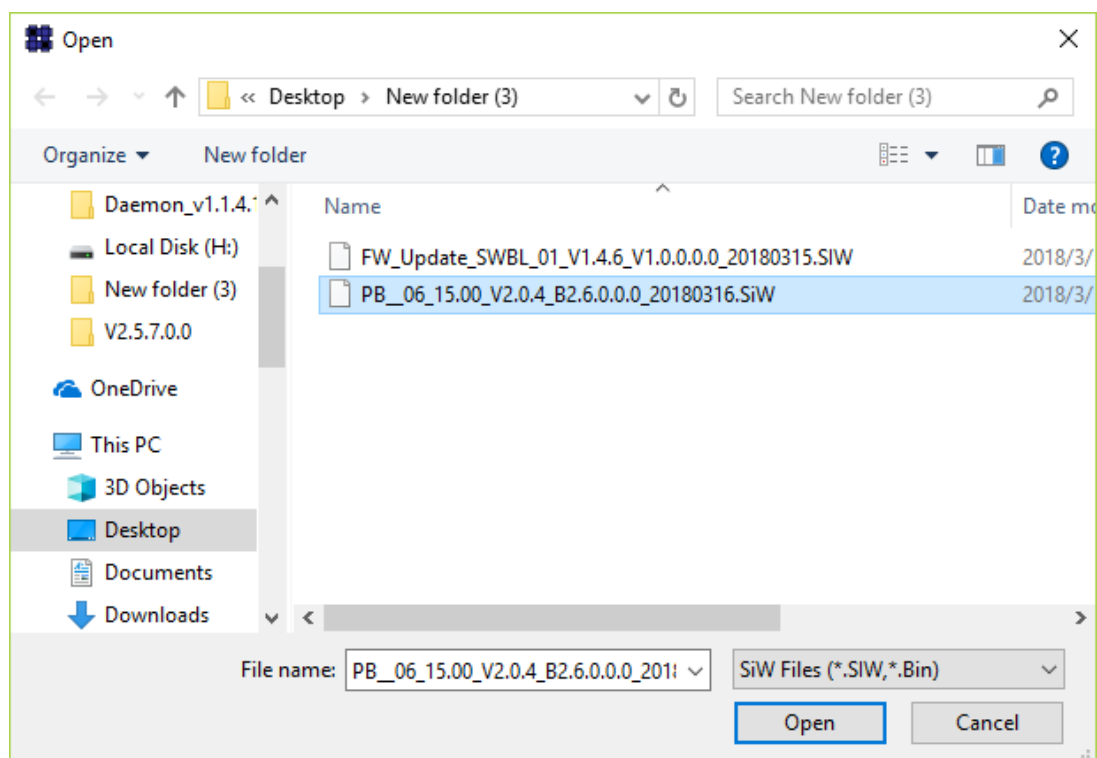

4. After selecting SIW File, the “FW Update” button will become enable. Click “FW Update” button to start BOOT upgrade and it will show upgrade progress.

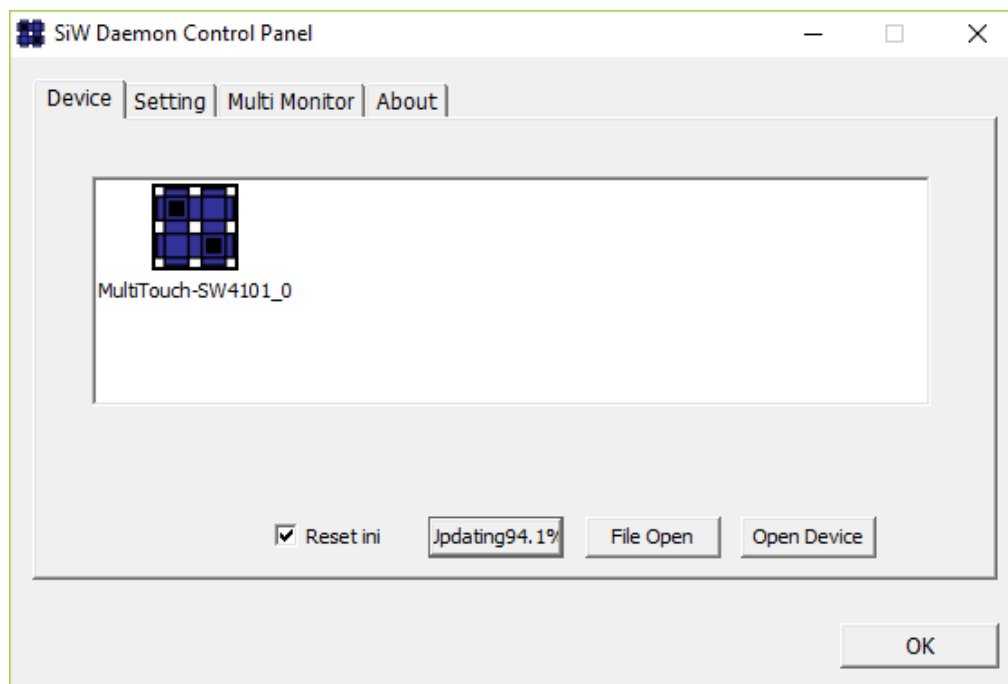

5. When the progress reaches 100%, the BOOT upgrade is completed. At this time, the device will enter DFU mode, and double-click device icon will not open the device.

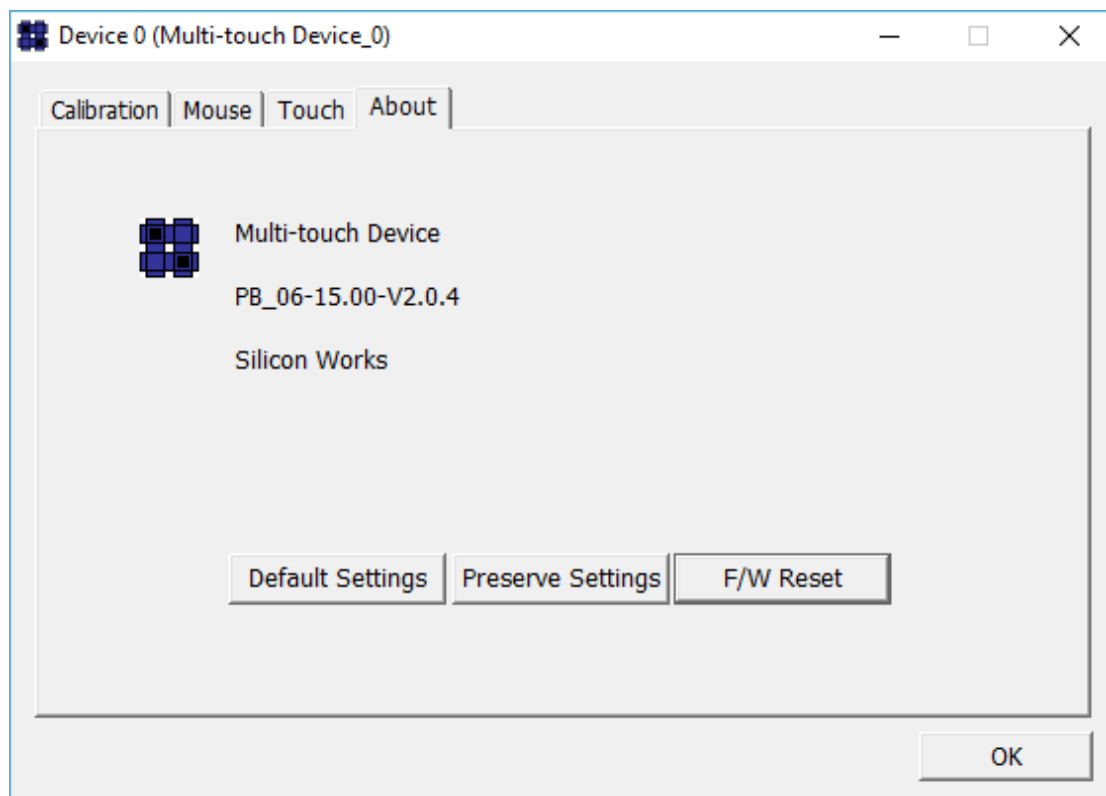

6. Click the device icon to select the device you want to upgrade, click the “File Open” button to select SIW file. This SIW file is FW, the FW version is V2.0.4, the base FW version is 2.6.0.0.0.

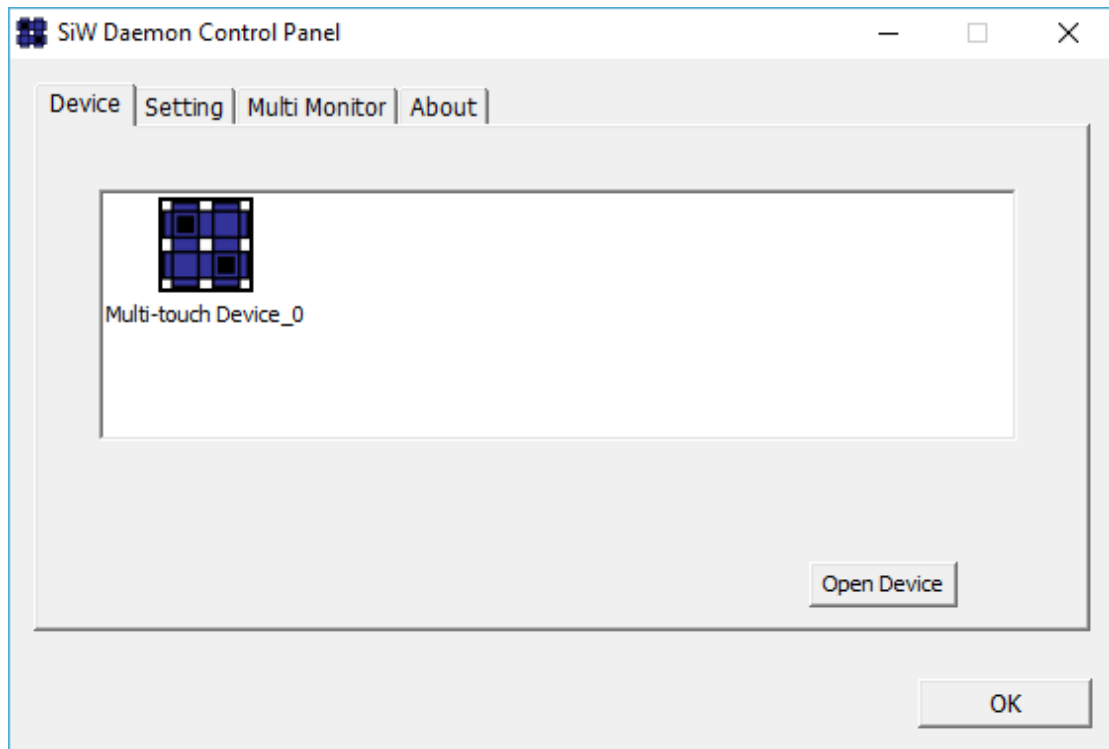

7. Click “FW Update” button to start FW upgrade and it will show upgrade progress.

8. When the progress reaches 100%, the FW upgrade is completed. It can double-click the device icon to open the device normally. You can see the upgraded FW version under the “About” tab.

9. Under the interface of the SiW Daemon Control Panel, press “F5” of the keyboard to hide the function of the upgrade to prevent mis-operation.
